

computed market-based valuation for at least one component from property, the financial documentation being made by steps including:

controlling a digital electrical computer processor to manipulate electrical signals computing a market-based valuation for the at least one component from property, wherein the property is from a group consisting of a tax-exempt security and a portfolio of tax-exempt securities, the market-based valuation reflecting at least one from a group consisting of expected returns under performance scenarios, price, and quantitative descriptions of risk, as part of a financial analysis output;

[receiving] electronically communicating at least some of the financial analysis output as input to a second digital electrical computer having a programmed processor, the second digital electrical computer storing the at least some of the financial output in memory accessible to the programmed processor and storing electrical signals representing some corresponding text in memory accessed by the second digital electrical computer;

generating a second market-based valuation reflecting computation of a current market-based yield/discount rate for the component; and

generating a document including the second market-based valuation and the stored text at an output device electrically connected to said second digital electrical computer.

29. (Twice Amended) A method for making financial documentation having a computed market-based valuation for at least one component from property, the financial documentation being made by steps including:

controlling a digital electrical computer processor to manipulate electrical signals computing a market-based valuation for the at least one component from property not including any securities, the market-based valuation reflecting at least one from a group consisting of expected returns under performance scenarios, price, and quantitative

descriptions of risk, as part of a financial analysis output;

P1 [receiving] electronically communicating at least some of the financial analysis output as input to a second digital electrical computer having a programmed processor, the second digital electrical computer storing the at least some of the financial output in memory accessible to the programmed processor and storing electrical signals representing some corresponding text in memory accessed by the second digital electrical computer;

P1 generating a second market-based valuation [reflecting computation of a current market-based yield/discount rate] for the component; and

P1 generating a document including the second market-based valuation and the stored text at an output device electrically connected to said second digital electrical computer.

cm 30.(Once Amended) A method for making financial documentation having a computed market-based valuation for at least one component from property, the financial documentation being made by steps including:

P1 controlling a digital electrical computer processor to manipulate electrical signals computing a market-based valuation for the at least one component from property, wherein the property is from a group consisting of a fixed-income asset and a portfolio of fixed-income assets, the market-based valuation reflecting at least one from a group consisting of expected returns under performance scenarios, price, and quantitative descriptions of risk, as part of a financial analysis output;

P1 [receiving] electronically communicating at least some of the financial analysis output as input to a second digital electrical computer having a programmed processor, the second digital electrical computer storing the at least some of the financial analysis output in memory accessible to the programmed processor and storing electrical signals representing some corresponding text in memory accessed by the second digital electrical computer;

generating a second market-based valuation reflecting computation of a current market-based yield/discount rate for the component; and

generating a document including the second market-based valuation and the stored text at an output device electrically connected to said second digital electrical computer.

32
§1. (Once Amended) A method for making financial documentation having a computed market-based valuation for at least one component from property, the financial documentation being made by steps including:

controlling a digital electrical computer processor to manipulate electrical signals computing a market-based valuation for the at least one component from property, wherein the property is a fixed-income asset, the market-based valuation reflecting at least one from a group consisting of expected returns under performance scenarios, price, and quantitative descriptions of risk, as part of a financial analysis output;

[receiving] electronically communicating at least some of the financial analysis output as input to a second digital electrical computer having a programmed processor, the second digital electrical computer storing the at least some of the financial analysis output in memory accessible to the programmed processor and storing electrical signals representing some corresponding text in memory accessed by the second digital electrical computer;

generating a second market-based valuation reflecting computation of a current market-based yield/discount rate for the component; and

generating a document including the second market-based valuation and the stored text at an output device electrically connected to said second digital electrical computer.

CM

95

§3. (Once Amended) A method for making financial analysis output having a

computed market-based valuation for at least one component from property, the financial analysis output being made by steps including:

controlling a digital electrical computer processor to manipulate electrical signals generating a market-based valuation for the at least one component from property, wherein the property is from a group consisting of a tax-exempt security and a portfolio of tax-exempt securities, the market-based valuation reflecting at least one from a group consisting of expected returns under a performance scenario, a price, and a quantitative description of risk, as part of a financial analysis output;

[receiving] electronically communicating at least some of the financial analysis output as input to a second digital electrical computer having a second programmed processor, the second digital electrical computer storing the at least some of the financial analysis output in memory accessible to the second programmed processor;

second generating a second market-based valuation reflecting computation of a current market-based yield/discount rate for the component; and

second generating a second financial analysis output, including the second market-based valuation, at an output means electrically connected to said second digital electrical computer.

94. (Once Amended) A method for making financial analysis output including a computed market-based valuation for at least one component from property, the method including the steps of:

controlling a digital electrical computer processor to manipulate electrical signals generating a market-based valuation for the at least one component from property not including any securities, the market-based valuation reflecting at least one from a group consisting of expected returns under a performance scenario, a price, and a quantitative description of risk, as part of a financial analysis output;

97 [receiving] electronically communicating at least some of the financial analysis output as input to a second digital electrical computer having a programmed processor, the second digital electrical computer storing the at least some of the financial analysis output in memory accessible to the programmed processor corresponding to the second digital electrical computer;

97 second generating a second market-based valuation [reflecting computation of a current market-based yield/discount rate] for the component; and

97 second generating financial analysis output, including the second market-based valuation, at an output device electrically connected to said second digital electrical computer.

97
97 (Once Amended) A method for making financial analysis output having a computed market-based valuation for at least one component from property, the financial analysis output being made by steps including:

97 controlling a digital electrical computer processor to manipulate electrical signals generating a market-based valuation for the at least one component from property, wherein the property is from a group consisting of a fixed-income asset and a portfolio of fixed-income assets, the market-based valuation reflecting at least one from a group consisting of expected returns under a performance scenario, a price, and a quantitative description of risk, as part of a financial analysis output;

97 [receiving] electronically communicating at least some of the financial analysis output as input to a second digital electrical computer having a second programmed processor, the second digital electrical computer storing the at least some of the financial analysis output in memory accessible to the second programmed processor;

97 second generating a second market-based valuation reflecting computation of a current market-based yield/discount rate for the component; and

second generating a second financial analysis output, including the second market-based valuation, at an output means electrically connected to said second digital electrical computer.

96. (Once Amended) A method for making financial analysis output having a computed market-based valuation for at least one component from property, the financial analysis output being made by steps including:

controlling a digital electrical computer processor to manipulate electrical signals generating a market-based valuation for the at least one component from property wherein the property is a fixed-income asset, the market-based valuation reflecting at least one from a group consisting of expected returns under a performance scenario, a price, and a quantitative description of risk, as part of a financial analysis output;

[receiving] electronically communicating at least some of the financial analysis output as input to a second digital electrical computer having a second programmed processor, the second digital electrical computer storing the at least some of the financial analysis output in memory accessible to the second programmed processor;

second generating a second market-based valuation reflecting computation of a current market-based yield/discount rate for the component; and

second generating a second financial analysis output, including the second market-based valuation, at an output means electrically connected to said second digital electrical computer.

97. (Once Amended) A method for making financial analysis output having a system-determined purchase price [computed market-based valuation] for at least one component from property in consummating a sale through a financial exchange, the financial analysis output being made by steps including:

101 converting input data, representing at least one component from property, wherein the property is a fixed-income asset, into input digital electrical signals representing the input data;

102 providing a digital electrical computer system controlled by a processor electrically connected to receive said input digital electrical signals and electrically connected to an output means;

103 controlling a digital electrical computer processor to manipulate electrical signals to compute a [market-based valuation] system-determined purchase price for the at least one component from property in consummating [making] a sale and corresponding purchase of the component [through a financial exchange]; and

104 generating the financial analysis output at said output means.

105 (Once Amended) A method for making financial analysis output having a system-determined purchase price ~~computed market-based valuation~~ for at least one component from property, the financial analysis output being made by steps including:

106 converting input data, representing at least one component from property, wherein the property includes a tax-exempt security, into input digital electrical signals representing the input data;

107 providing a digital electrical computer ^{system} controlled by a processor electrically connected to receive said input digital electrical signals and electrically connected to an output means;

108 controlling a digital electrical computer processor to manipulate electrical signals to compute a system-determined purchase price ~~market-based valuation~~ for the at least one component from property in consummating making a sale and corresponding purchase of the component through a financial exchange;

109 and generating the financial analysis output at said output means.

Please add claims 123-128 as follows:

CM

31/123

The method of claim 30, wherein the step of controlling includes controlling the digital electrical computer processor to manipulate the electrical signals generating the market-based valuation for at least one security for corporate debt as the component.

CM

33/124

32

The method of claim 31, wherein the step of controlling includes controlling the digital electrical computer processor to manipulate the electrical signals generating the market-based valuation for corporate debt as the fixed-income asset.

CM

98/125

97

The method of claim 96, wherein the step of controlling includes controlling the digital electrical computer processor to manipulate the electrical signals generating the market-based valuation for at least one security for corporate debt as the component.

CM

100

99

126

The method of claim 96, wherein the step of controlling includes controlling the digital electrical computer processor to manipulate the electrical signals generating the market-based valuation for corporate debt as the fixed-income asset.

CM

102

101

127

The method of claim 97, wherein the step of controlling includes controlling the digital electrical computer processor to manipulate the electrical signals generating the system-determined purchase price for corporate debt as the fixed-income asset.
